Safety Precaution

⚠ Safety mark

Safety is very important with this unit. When replacing the parts marked ⚠, be sure to use only those designated parts. The designated resistors, diodes, transistors become hot in use. When replacing, be sure to secure them with a distance of more than 5 mm from the circuit board. In addition, they are banded together to avoid touching other wiring, recheck this point as well after repair.

The wiring of the primary side should be wound more than one and half times, then soldered.

Safety Component Parts List ⚠

Features

1. Package of 4 mini components
 2. ANRS/DOBLY* B NR (Noise Reduction) system (Rec/Play)
 3. Cassette deck is usable as headphone stereo player
 4. 3-way power supply
 5. Music Scan** facility (with the cassette section connected to the receiver)
 6. 4-Band Receiver
 - High output with small size
 - Fine tuning
 - Bass/Treble tone controls
 - Variable monitor
 7. Piggyback stereo cassette deck
 - ANRS/Dolby B noise reduction system
 - Anti-rolling mechanism
 - Built-in electret condenser microphone
 - Metal tape compatible
 8. Micro Speakers
 - 9.2 cm (3-5/8") full range speaker x 2
- * Noise reduction system manufactured under license from Doby Laboratories Licensing Corporation.
 * "Dobly" and the double-D symbol are trademarks of Doby Laboratories Licensing Corporation.
 * "Under license of Staar S.A. Brussels, Belgium."

Specifications

General

Frequency ranges	: FM 88—108 MHz AM 540—1600 kHz SW1 2.3—7 MHz SW2 7—22 MHz	Wow and flutter : 0.2% (WRMS) Fast forward time : Approx. 105 sec. (C-60 cassette) S/N ratio : 50 dB (Metal) Frequency response : 60—14,000 Hz (Metal) 60—13,000 Hz (Normal)
Antennas	: Telescopic antennas for FM, SW Built-in ferrite core antenna for AM, SW1	Input jacks : EXT MIC (stereo mini-plug 3.5 mm dia.) x 1, Minimum recording input level 0.78 mV (—62 dBV), Matching impedance 200 Ω—2kΩ
Input jacks	: AUX IN (mini-plug 3.5 mm dia.) x 2 Minimum input level 78 mV Input impedance 20 kΩ	Output jacks : PHONES (stereo mini-plug 3.5 mm dia.) x 1, output level 15 mW/32 Ω Matching impedance 16—32 Ω
Output jacks	: EXT SPK (4-pin) x 2, 4 W (3.2 Ω) Matching impedance 3.2—8 Ω PHONES (Stereo mini-plug 3.5 mm dia.) x 1, 0—50 mW (32 Ω)	Power output : Total 30 m watts (15 mW + 15 mW) (32 Ω)
Power output	: Max. 10 W (5 W + 5 W) (3.2 Ω) Music power 12 W (6 W + 6 W) (3.2 Ω, AC) FTC indication 2 watts per channel, min. RMS, at 3.2 ohms from 100 Hz to 15 kHz, with no more than 10% total harmonic distortion	FTC indication : 2 watts per channel, min. RMS, at 3.2 ohms from 100 Hz to 15 kHz, with no more than 10% total harmonic distortion
Power supply	: AC 230/127/110 V, 50/60 Hz (PC-M100W) AC 240 V, 50/60 Hz (PC-M100WH), AC 240/220/120 V, 50/60 Hz PC-M100JW AC 120 V 50/60 Hz PC-M100C DC 12 V (R14 ("C") battery x 8), Car battery through a car battery adapter	Power supply : DC 3 V (R6 ("AA") battery x 2) Dimensions : 142(W) x 87.5(H) x 36(D) mm (5-5/8" x 3-3/8" x 1-1/2") (including pads and controls) 142(W) x 82.5(H) x 36(D) mm (5-5/8" x 3-1/2" x 1-1/2") (excluding pads and controls)
Power consumption	: 16 watts (with the POWER switch set to ON)	Weight : Approx. 380 g (0.8 lbs) (including batteries)
Dimensions	: 350(W) x 194(H) x 135(D) mm (13-3/8" x 7-3/4" x 5-3/8") (with antennas retracted and handle folded back)	Speaker section Type : Full-range bass reflex system (book-shelf type) Speaker units : 9.2 cm (3-5/8") cone x 1 Impedance : 3.2 Ω Rated input : 4 watts Dimensions : 104(W) x 150(H) x 99(D) mm (4-1/8" x 6" x 4") including pads Weight : Approx. 930 g (2 lbs) (with batteries)
Weight	: Approx. 3.6 kg (7.9 lbs) (including batteries)	Design and specifications are subject to change without notice for improvement.
Cassette deck section		
Track system	: Stereo	
Heads	: 2 Gap ferrite + magnet head for erasure, METAPERM head for recording/playback

Attaching and Detaching the Handle

Attaching the handle

Set the handle lock buttons to the antenna side, fix the handle, and set the handle lock buttons to the deck side (▼ HANDLE LOCK mark).

Note: Make sure that the handle is firmly locked when carrying the unit.

Attaching and Detaching the Speakers

When using the speakers attached to the receiver

With direct connection, no connection cords are required.

1. Insert the speaker slot into the receiver holder as shown and slide down the speaker.

Attach the right speaker in the same way.

Note: Make sure that the POWER switch is set to OFF (I) when attaching or detaching the speakers.

When using the speakers detached from the receiver

A better stereo effect can be obtained when the built-in connection cords with plugs are used.

1. Lift the speaker while pressing the speaker release button on top of the speaker as shown.
2. Take out the connection cord with a plug from the rear of the speaker and connect to the receiver as shown.

Connect the connection cord of the left speaker in the same way.

Note: With the center concave of the plug turned downwards, connect the connection cord.

Attaching and Detaching the Deck Section

Detaching the deck section from the main unit

1. Press the RELEASE button. The lock is released and the lower part of the cassette recorder comes out slightly.
2. Detach it as shown.

Note: Make sure that the POWER switch is set to OFF () When attaching or detaching the deck section.

Attaching the deck section to the main unit

1. Align concaves (A) of the deck section and convexes (B) of the receiver section.
2. Press the lower part of the deck section in the direction of the arrow until it locks. (A click sound will be heard when it locks completely.)

Note: Confirm that the deck section is securely attached to the main unit.

Speaker Section

Fig. 5

Disassembling the Receiver Section

A. Removal of rear cabinet ass'y (Fig. 6)

1. Remove 4 screws ① SDSP3004R from the right and left sides of the front cabinet.
2. Remove the telescopic antenna and the connector wires of the AUX board to remove the rear cabinet ass'y.

Fig. 6

B. Removal of tuner board + preamplifier P.W. Board (Fig. 6, 7 and 8)

1. Remove the rear cabinet ass'y.
2. Remove 2 screws ② SSSP30006M from the right and left sides of the front cabinet.
3. Remove screw ③ SPSK2008N from the top plate and pull the tuner board + preamplifier board out of the cabinet.

Fig. 7

C. Removal of power amplifier P.W. Board ass'y (Figs 6 and 8)

1. Remove the rear cabinet ass'y.
2. Remove 2 screws ④ SSSP3006M from the right and left sides of the front cabinet.
3. Cut the clamp of the speaker connector wires and take the power amplifier board ass'y out of the cabinet.

Fig. 8

D. Replacement of power IC (Fig. 9)

1. Take out the power amplifier board and unsolder the IC.
2. Remove screw ⑤ SBSB2606Z at the side of transistor Q306 and take out the power IC together with the radiation unit.
3. Remove screw ⑤ SBSB2606Z at the IC side to remove the power IC:

Note: When remounting it, apply silicone grease G-746 to the IC and the radiation unit.

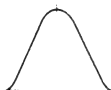

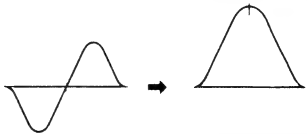

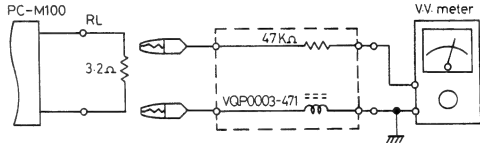

Fig. 9

Tuner Alignment

BASIC CONDITIONS

POWER SOURCE OF THE RECEIVER	DC 12 V, AC240/220/120 V, 50/60 Hz: JW AC120 V, 50/60 Hz: C AC230/127 V/110 V, 50/60 Hz: W
LOAD RESISTANCE OF THE RECEIVER	50 mW (0.4 V)/3.2 Ω
MODULATION OF SSG	400 Hz. 30%
Item	Description
1. AM IF ALIGNMENT 1-1 Conditions of the receiver. (1) Power source: (2) Function switch position: (3) Band select switch: (4) Volume control: (5) Tone control: (6) Variable capacitor: 1-2 Connection of Sweeper and the receiver (1) Tuner input: (2) Tuner output: 1-3 Aligning position: 1-4 Alignment (Waveform): 	DC 4.5 V (When the power is supplied directly to the tuner in the receiver, the voltage should be adjusted to the proper level which shall be required by the tuner.) RADIO AM Minimum gain position Center (Bass, Treble) position Near the minimum capacity position where no signal come in. Positive side to TP4 Positive side to TP2 Negative side to TP3 T3, T4 Adjust AM I.F.T. (above mentioned aligning position) so that maximum and symmetrical wave form can be obtained. In this case, the wavehead should be appeared at the center marker (450 kHz) on the scope of Sweeper.
2. FM IF ALIGNMENT 2-1 Conditions of the receiver (1) Power source: (2) Function switch position: (3) Band select switch: (4) Volume control: (5) Tone control: (6) Variable capacitor: 2-2 Connection of Sweeper and the receiver (1) Tuner input: (2) Tuner output: NOTE a) Attach a capacitor (30 pF) and resistor (560 k Ω) in series to the positive side cable which shall be led from Sweeper input. b) Attach a capacitor (30 pF) and a resistor (100 k Ω) in series to the positive side cable which shall be led from Sweeper output. 2-3 Aligning position: 2-4 Alignment (Waveform):	Same as mentioned in item 1-1 RADIO FM Minimum gain position Center (Bass, Treble) position Near the minimum capacity position where no signal come in. Positive side to TP1 Positive side to TP2 Negative side to TP3 a) IF Waveform: T1 b) Discriminate Waveform: T2 ("S" curve waveform) Adjust the discriminate coil (T2) so that "S" curve waveform may be changed to IF waveform as shown in following figure.  After above, adjust T1 so that max. sensitivity and symmetrical IF waveform can be obtained on the scope of Sweeper. Adjust the discriminate T2 again so that above symmetrical IF waveform may be changed to balanced "S" curve waveform.
b) Discriminate Waveform:	

Item			Description		
3. AM RF ALIGNMENT 3-1 Conditions of the receiver. (1) Power source: (2) Function switch position: (3) Volume control: (4) Tone control: (5) Variable capacitor: 3-2 Conditions of SSG. (1) Modulation: (2) Frequency: (3) Output level of the attenuator in SSG: 3-3 Power output measuring position: 3-4 Alignment:			Same as mentioned in item 1-1. RADIO 50 mW Center (Bass, Treble) position Refer the following list shown in item 3-4. Refer the basic condition Refer the following list shown in item 3-4. Approx. 50 mW Speaker terminals		
					
	Band Select Switch Position	Sort of Antenna to be attached to SSG	Frequency of SSG	Variable Capacitor Position	Aligning Position
1	AM	Loop Antenna	520 kHz	Max. capacity	L6
2			1,650 kHz	Min. capacity	TC-6
3			Adjust the above aligning position (L6 & TC-6) repeatedly so that the tuner can be received above frequency range (band width).		
4			620 kHz	to be received 620 kHz	L2
5			1,400 kHz	to be received 1,400 kHz	TC-2
6			Adjust the above aligning position (L2 & TC-2) repeatedly so that the tuner can be obtained the best sensitivity.		
7	SW1	Loop Antenna	2.2 MHz	Max. capacity	L7
8			7.3 MHz	Min. capacity	TC-7
9			Adjust the above aligning position (L7 & TC-7) repeatedly so that the tuner can be received above frequency range (band width).		
10			2.3 MHz	to be received 2.3 kHz	L3
11			7.0 MHz	to be received 7.0 MHz	TC-3
12			Adjust the above aligning position (L3 & TC-3) repeatedly so that the tuner can be obtained the best sensitivity.		
13	SW2	Dummy Antenna	6.8 MHz	Max. capacity	L8
14			23.0 MHz	Min. capacity	TC-8
15			Adjust the above aligning position (L8 & TC-8) repeatedly so that the tuner can be received above frequency range (band width).		
16			7.0 MHz	to be received 7.0 MHz	L4
17			22.0 MHz	to be received 22.0 MHz	TC-4
18			Adjust the above aligning position (L4 & TC-4) repeatedly so that the tuner can be obtained the best sensitivity.		

Item			Description		
4. FM RF ALIGNMENT			Same as mentioned in item 1-1. RADIO FM 50 mW Center (Bass, Treble) position Refer the following list shown in item 4-3. Refer the basic condition Refer the following list shown in item 4-3. The level shall be decided by the load resistance of the receiver mentioned in the basic conditions.		
4-1 Conditions of the receiver.					
(1) Power source:					
(2) Function switch position:					
(3) Band select switch:					
(4) Volume control:					
(5) Tone control:					
(6) Variable capacitor:					
4-2 Condition of FM SSG.					
(1) Modulation:					
(2) Frequency:					
(3) Output level of the attenuator in FM SSG:					
4-3 Alignment:					
	Band Select Switch Position	Sort of Antenna to be attached to SSG	Frequency of FM SSG	Variable Capacitor Position	Aligning Position
1	FM	Dummy Antenna	87.5 MHz	Max. capacity	L5
2			109.0 MHz	Min. capacity	TC-5
3			Ajust the above aligning position (L5 & TC-5) repeatedly so that the tuner can be received above frequency range (band width).		
4			90 MHz	to be received 90 MHz	L1
5			106 MHz	to be received 106 MHz	TC-1
6			Adjust the above aligning position (L1 & TC-1) repeatedly so that the tuner can be obtained the best sensitivity.		

FM MPX Alignment

A. 19 kHz Alignment (Regular Method)

1. Connect a frequency counter to the test point TP7 (earth = TP3).
2. Supply the monaural signal (84 MHz, 60 dB) across the antenna terminal.
3. Adjust the variable resistor VR1 so that the frequency becomes $19\text{ kHz} \pm 100\text{ Hz}$.

B. 19 kHz Alignment (Simplified Method)

1. Tune to an FM stereo broadcast.
2. Set the variable resistor VR1 to the minimum position of the range in where the Lch and Rch selecting.

Parts Arrangement for Alignment

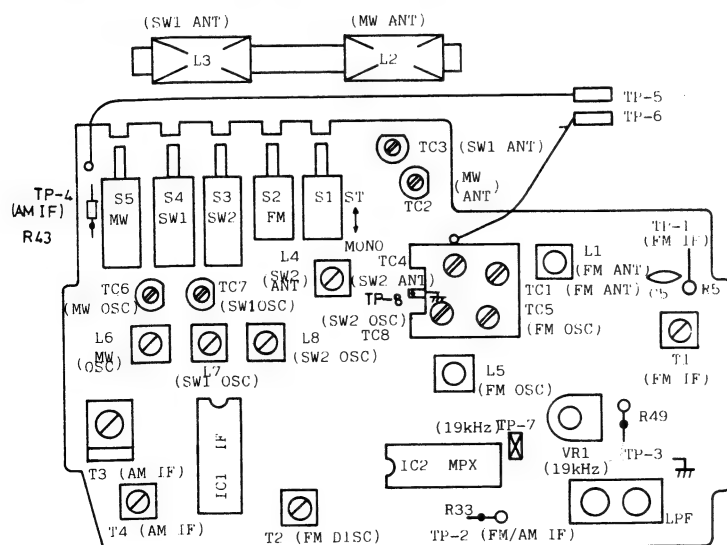

Fig. 10

Dummy Antenna

$R_1 + R_2 = 80\ \Omega$ "A" → TP-5
 $C = 10\text{ pF}$ "E" → TP-8
 R_1 : Output impedance of S.S.G.

Wiring Connections

Fig. 16

How to Engage Dial Cord

- 1. Turn the dial drum fully clockwise (to the highest frequency).
- 2. Use Kevlar cord (560 mm long and 0.4 mm in diameter).
- 3. Install the string in the sequence of the numbers.

Disassembling the Deck Section

A. Removal of top cover (Fig. 22)

1. Open the cassette holder, remove 4 screws (1) SPSH1740N, then remove the top cover.

Note: When remounting it, insert its hand strap attaching metal side first.

Fig. 22

B. Removal of rear cover ass'y (Figs 23 and 24)

1. Remove the top cover.
2. Remove screw (2) SPSH1720N and 5 screws (3) SPSH1735N from the right and left sides.
3. Remove 2 screws (4) SPSH1735N at the battery cover side and remove the rear cover ass'y from the electret condenser microphone side while pressing in the lever ass'y.

Fig. 23

Fig. 24

C. Removal of main board ass'y (Fig. 25)

1. Remove the rear cover.
2. Remove 4 screws (5) SPSK1730N and screw (6) FO0410-25N, then set up the main board ass'y.

Note: when remounting it, install so that the REC/PB select switch S701 and the REC lever operate in response to each other.

Fig. 25

D. Removal of cassette lid ass'y (Fig. 26)

1. Remove the rear cover.
2. Remove 2 screws (7) SSSK1720M.
3. Remove the cassette lid ass'y, being careful not to lose the door springs.

Note: When remounting it, set the longer side of the spring to the cassette lid side.

E. Removal of cassette mechanism parts

The procedure of removal is the same as in RC-S55. Refer to Service Manual No. 1490 on page 6.

Conditions

Power supply	: DC 3 V	Specified input level	: AUX -45 dBs
Input	: Connector pins 2 and 3		MIC -60 dBs
Output	: Connector pins 5 and 6		When using AUX, connect a shorting wire between the microphone switch and S706 from the rear of the board.
BEAT CUT	: "1"		
DOLBY NR	: "OFF"		

Item	Tape to be used	Adjustment and check	Adjustment point
1. Azimuth	Test tape VTT-658 (10 kHz)	With maximum output, minimize the L/R phase difference.	REC/PB head azimuth adjustment screw
2. Tape speed adjustment and wow/flutter check	Test tape VTT-656 (3 kHz)	Adjust the output frequency to $3,010 \pm 15$ Hz. Wow and flutter should be less than 0.28% (JIS WRMS).	VR751 (Motor governor P.W. Board).
3. PB level adjustment	Test tape VTT-664 (1 kHz)	Adjust it to -23 dBs between connector pins 5 and 6	VR502, VR602
4. Bias frequency adjustment TAPE: METAL	—	Connect a frequency counter across R729 (2.2 Ω) and adjust it to 48 kHz. In this case, erase current should be 50-60 mA (110-143 mV/2.2 Ω).	L701
5. REC/PB frequency response adjustment	TS-5 (for normal)	With TAPE switch at NORM, record 1 kHz and 10 kHz at -65 dBs (reference level -20 dBs) alternately and play it back. In this case, the deviation in output level of 10 kHz from 1 kHz should be 0 dB +1, -0 dB.	VR504, VR604
(REC/PB sensitivity adjustment)	"	Record 1 kHz at -55 dBs and play it back. In this case, the level difference between REC and PB should be 0 ± 0.5 dB.	VR503, VR603
(Metal tape frequency response check)	TS-7 (for metal)	With TAPE switch at METAL... REC/PB frequency response of -65 dBs input: 10 kHz/1 kHz = 0 ± 2 dB REC/PB level difference of -55 dBs input: 1 kHz = 0 ± 1 dB	—
6. Dolby ON REC/PB frequency response check	—	250 Hz to 6.3 kHz: within -5 dB (-65 dBs input) At 12.5 kHz: within -7 dB	—
7. Microphone sensitivity check	—	Apply 1 kHz -60 dBs to MIC. In this case, the output should be -23 dBs ± 2 dB between connector pins 5 and 6.	—

Cassette Mechanism Section

When replacing a mechanical part, check the items below.

Item	Standards	Testing method	Tape to be used
1. Supply voltage	Rated voltage: DC 3 V Motor operating voltage range: DC 2.2 – 4 V	Constant voltage power supply	—
2. Tape speed	4.8 cm/s (3,000 Hz) + 3% – 2% Variation width 2%	Frequency counter (digital counter)	VTT-656
3. Wow & flutter	Less than 0.28% (WRMS)	Wow meter	VTT-656
4. Take-up torque	PLAY 28–70 g.cm FF 50–100 g.cm REW 50–100 g.cm	In PLAY mode, when the reel is locked, no slippage should occur between the idler, reel and take-up pulley. Torque gauge CTG-N (made by Tohnichi or its equivalent)	—
5. Current consumption (of motor only)	PLAY less than 160 mA FF at end of tape, less than 250 mA REW when reel is locked, less than 530 mA	DC current meter	C-60 Use a tape with normal take-up torque.
6. Pinch roller pressure	200–280 g	When pinch roller stops with tension gauge pulled horizontally.	
7. Thrust of flywheel not constant	0.05–0.2 mm	Clearance gauge	
8. Head position at PLAY or REC	 <p>In PLAY (REC) mode, each head should be positioned within the ranges shown above. The top of each should not touch the cassette.</p>		All types of cassette tapes
9. Head position in music scan		(In cue or review, 5.3 mm)	
10. Auto-stop operation	At a reduced voltage of 4 V, the unit should auto-stop within 10 sec. after winding is finished in PLAY, FF and REW modes.		Any type of cassette tape
11. FF and REW times	FF less than 105 sec REW less than 105 sec		C-60

Exploded View, Wiring Connection and Parts List for Speakers

Replacement of speaker (Refer to the exploded view.)

1. Remove the speaker from the receiver section by pressing the speaker release button. (In this case, remove the batteries from the speaker.)
2. Remove 5 screws (29), then rear cover (17)
3. Unsolder the speaker terminals.
4. Remove speaker stay (32) (secured with adhesive compound).
5. Remove 5 screws (8), then 3 clamps (7) and bracket (40), to take out the speaker.

Fig. 38

△ parts are safety assurance parts.

When replacing those parts, make sure to use the specified one.
